

The main features of the Hawaiian technique, ^{were} ~~and~~ the preparation of netting, made with the fisherman's basket, to the required size and the attachment of the feathers in small bunches to the appropriate parts of the ~~net~~ ^{net} mesh with a separate binding thread. All fiber material was obtained from the olona (Touchardia latifolia). The netting foundation ranged from a very fine mesh to the coarse mesh of a fishing net. The feathers were obtained from a variety of birds; small feathers from forest birds and large feathers from the domestic fowl and various seabirds.
